

## Project Design phase - 2

### Data Flow Diagrams

Date	9th November 2022
Team ID	PNT2022TMID03078
Project Name	Gas Leakage monitoring & Alerting system for Industries
Maximum Marks	4 Marks

### Data Flow Diagrams:

A traditional visual representation of a system's information flows is a Data Flow Diagram (DFD). The appropriate amount of the system requirement can be graphically represented by a neat and clear DFD. It shows how information enters and leaves the framework, what changes the data, and where information is put away.

## User Stories

To list all of the product's user stories, use the template below.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	The mobile app is available for installation.	I can access my account / dashboard	High	Sprint-1
		USN-2	The user can enter their email address and mobile phone number.	I can receive confirmation email & click confirm	High	Sprint-1
	Login	USN-3	Client can sign on to the application utilizing email and secret word.	I can Login into my application	High	Sprint-1
	Dashboard	USN-4	The user can update their information, such as an alternate mobile number.	I can view and change my details.	High	Sprint-2
		USN-5	The gas level and the sensors' current state are visible to the user.	I can view the data given by the device	High	Sprint-2
Customer (Web user)	Usage	USN-1	The website allows users to sign up using an email address or a phone number.	I can receive confirmation email & click confirm	High	Sprint-3
		USN-2	The user can use their email address and password to access the website.	I can Login into my application	High	Sprint-3
Customer	Working	USN-1	The user can see the specifics.	Act according to the alarm	Medium	Sprint-3
		USN-2	The alert can be viewed and the power supply turned off.	Act according to the alarm	High	Sprint-4
Customer Care Executive	Action	USN-1	The user's issue is resolved by Executer.	I can solve the issues	High	Sprint-4
Administrator	Administration	USN-1	Checks periodically the state of the sensors and stores user data.	I can maintain the fault tolerance and error rate	High	Sprint-4
